

The current leader in P2P transactions
created to diversify your investments

Welcome to Monexo!

A decorative graphic on the left side of the slide, consisting of a large green semi-circle at the top and a yellow circle below it.

Monexo team – it is many years of experience in the field of P2P lending in both traditional lending and lending in the blockchain sector.

We know everything about the organization and control of business processes for amounts exceeding hundreds of millions of dollars.

About Us

At the moment, we are rapidly developing our service in more than 30 countries.

You can get access to the farm of more than 4,000 remote machines (servers) that are connected to a single center and perform the functions of creating a stir between buyers and sellers on p2p exchanges around the world.

We have created a whole network of remote machines that automatically works according to a given algorithm to increase the spread on top p2p crypto services such as Changelly, BitOasis, Coinmama, Cex, Rain, Kraken, Paxful...

Get detailed information about the earnings system

Many of you have faced the situation of buying cryptocurrency. In countries like China, India, Saudi Arabia, banks are less loyal to crypto, and therefore you will not often see Visa/Mastercard or other bank providers paying, mostly all amounts come from P2P market and OTC market, i.e. over-the-counter market for buying/selling assets.

That is where Maserati appears in the form of the company Monexo, which due to the remote farm of more than **4000 servers**, automates the task of increasing the spread and at the same time making a lot of deals - creating an artificial competition for the client, thereby obtaining the maximum profit from each transaction.

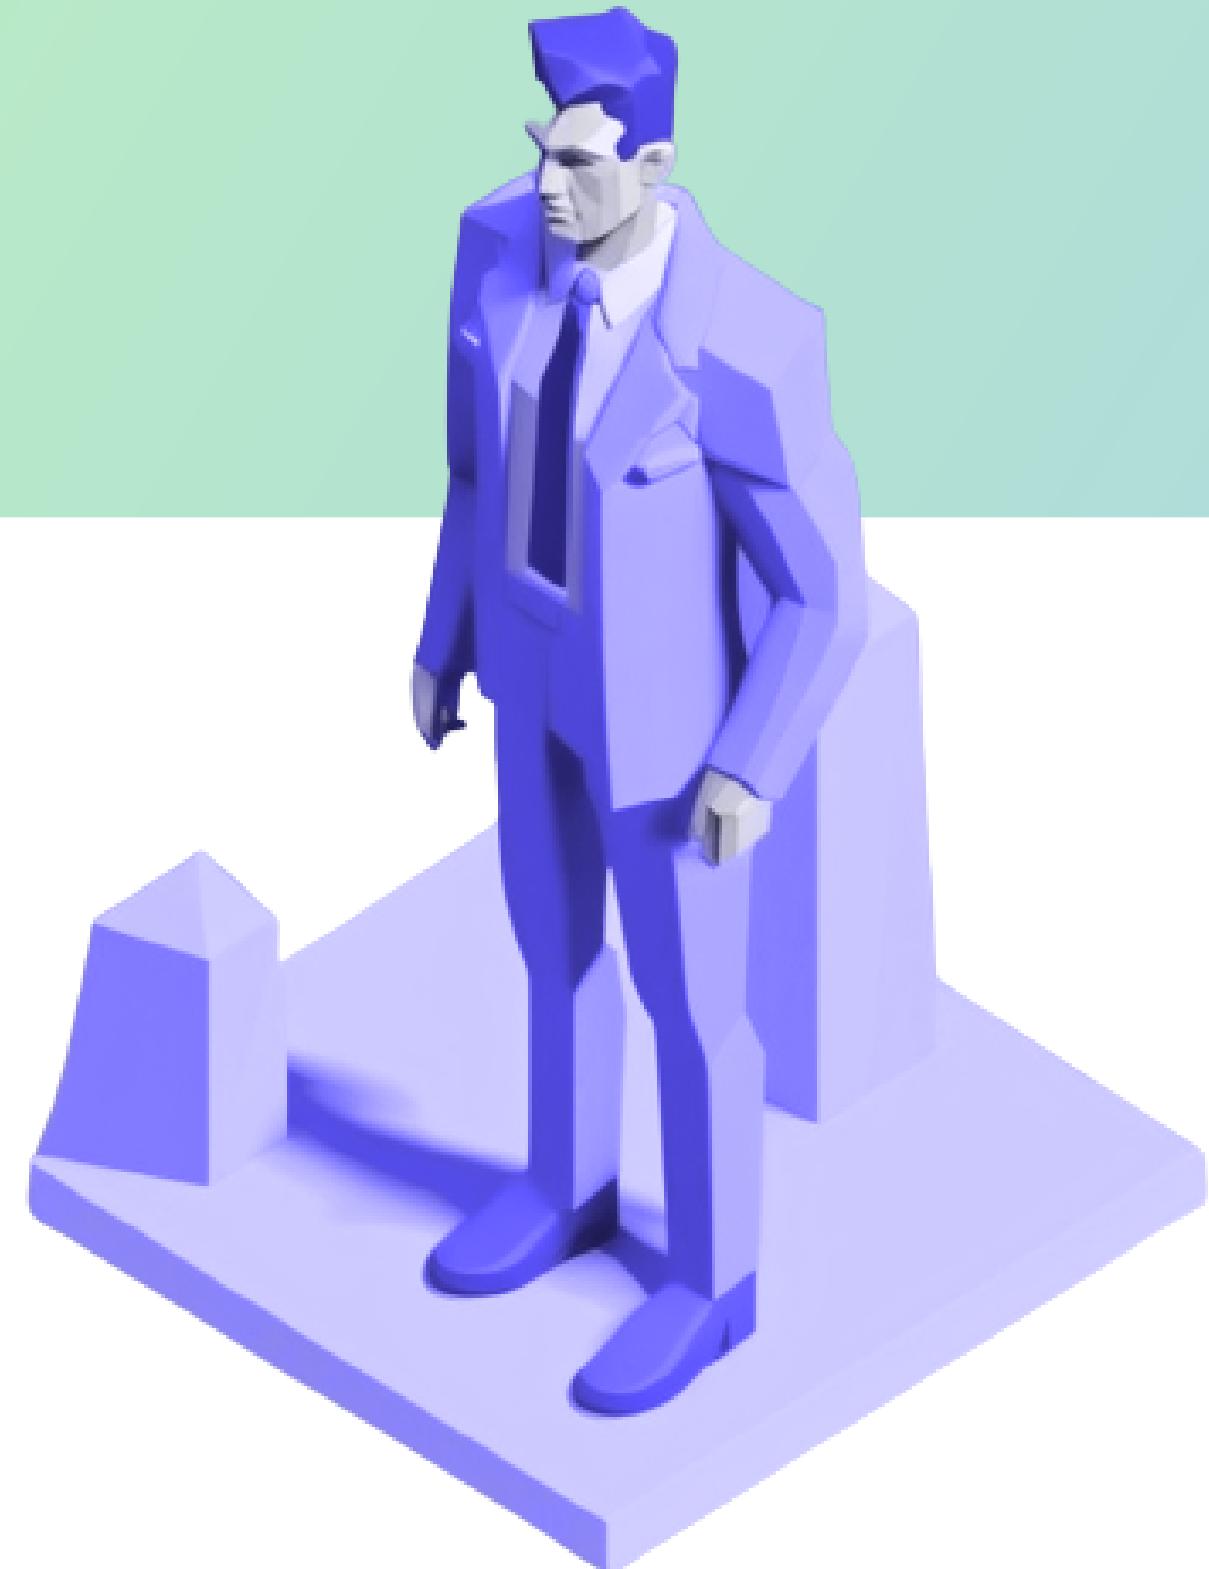

Due to this, one purchase/sale transaction generates a yield of more than **1-1.3%**, which in total is automated and without weekends can give more than **2-3% profit** per day on our working capital.

Who will like Monexo-invest?

We create a clear way of profit formation through the trend direction, so newcomers to investing can also earn with us.

⌚ THE TARGET AUDIENCE

The main target audience of the company will be people who like to choose different terms of investment and get the maximum profit in a short period of time.

★ BACKOFFICE

The main thing is that we have prepared a convenient backoffice with the ability to view statistics on all areas and investment proposals.

Our purpose and philosophy

We are not just about profitability, we are about the philosophy of freedom - Monexo team confidently believes that every person has the right to prosperity, and we in this unit of time 2023 are ready to give people the very financial freedom that many dream of only.

“

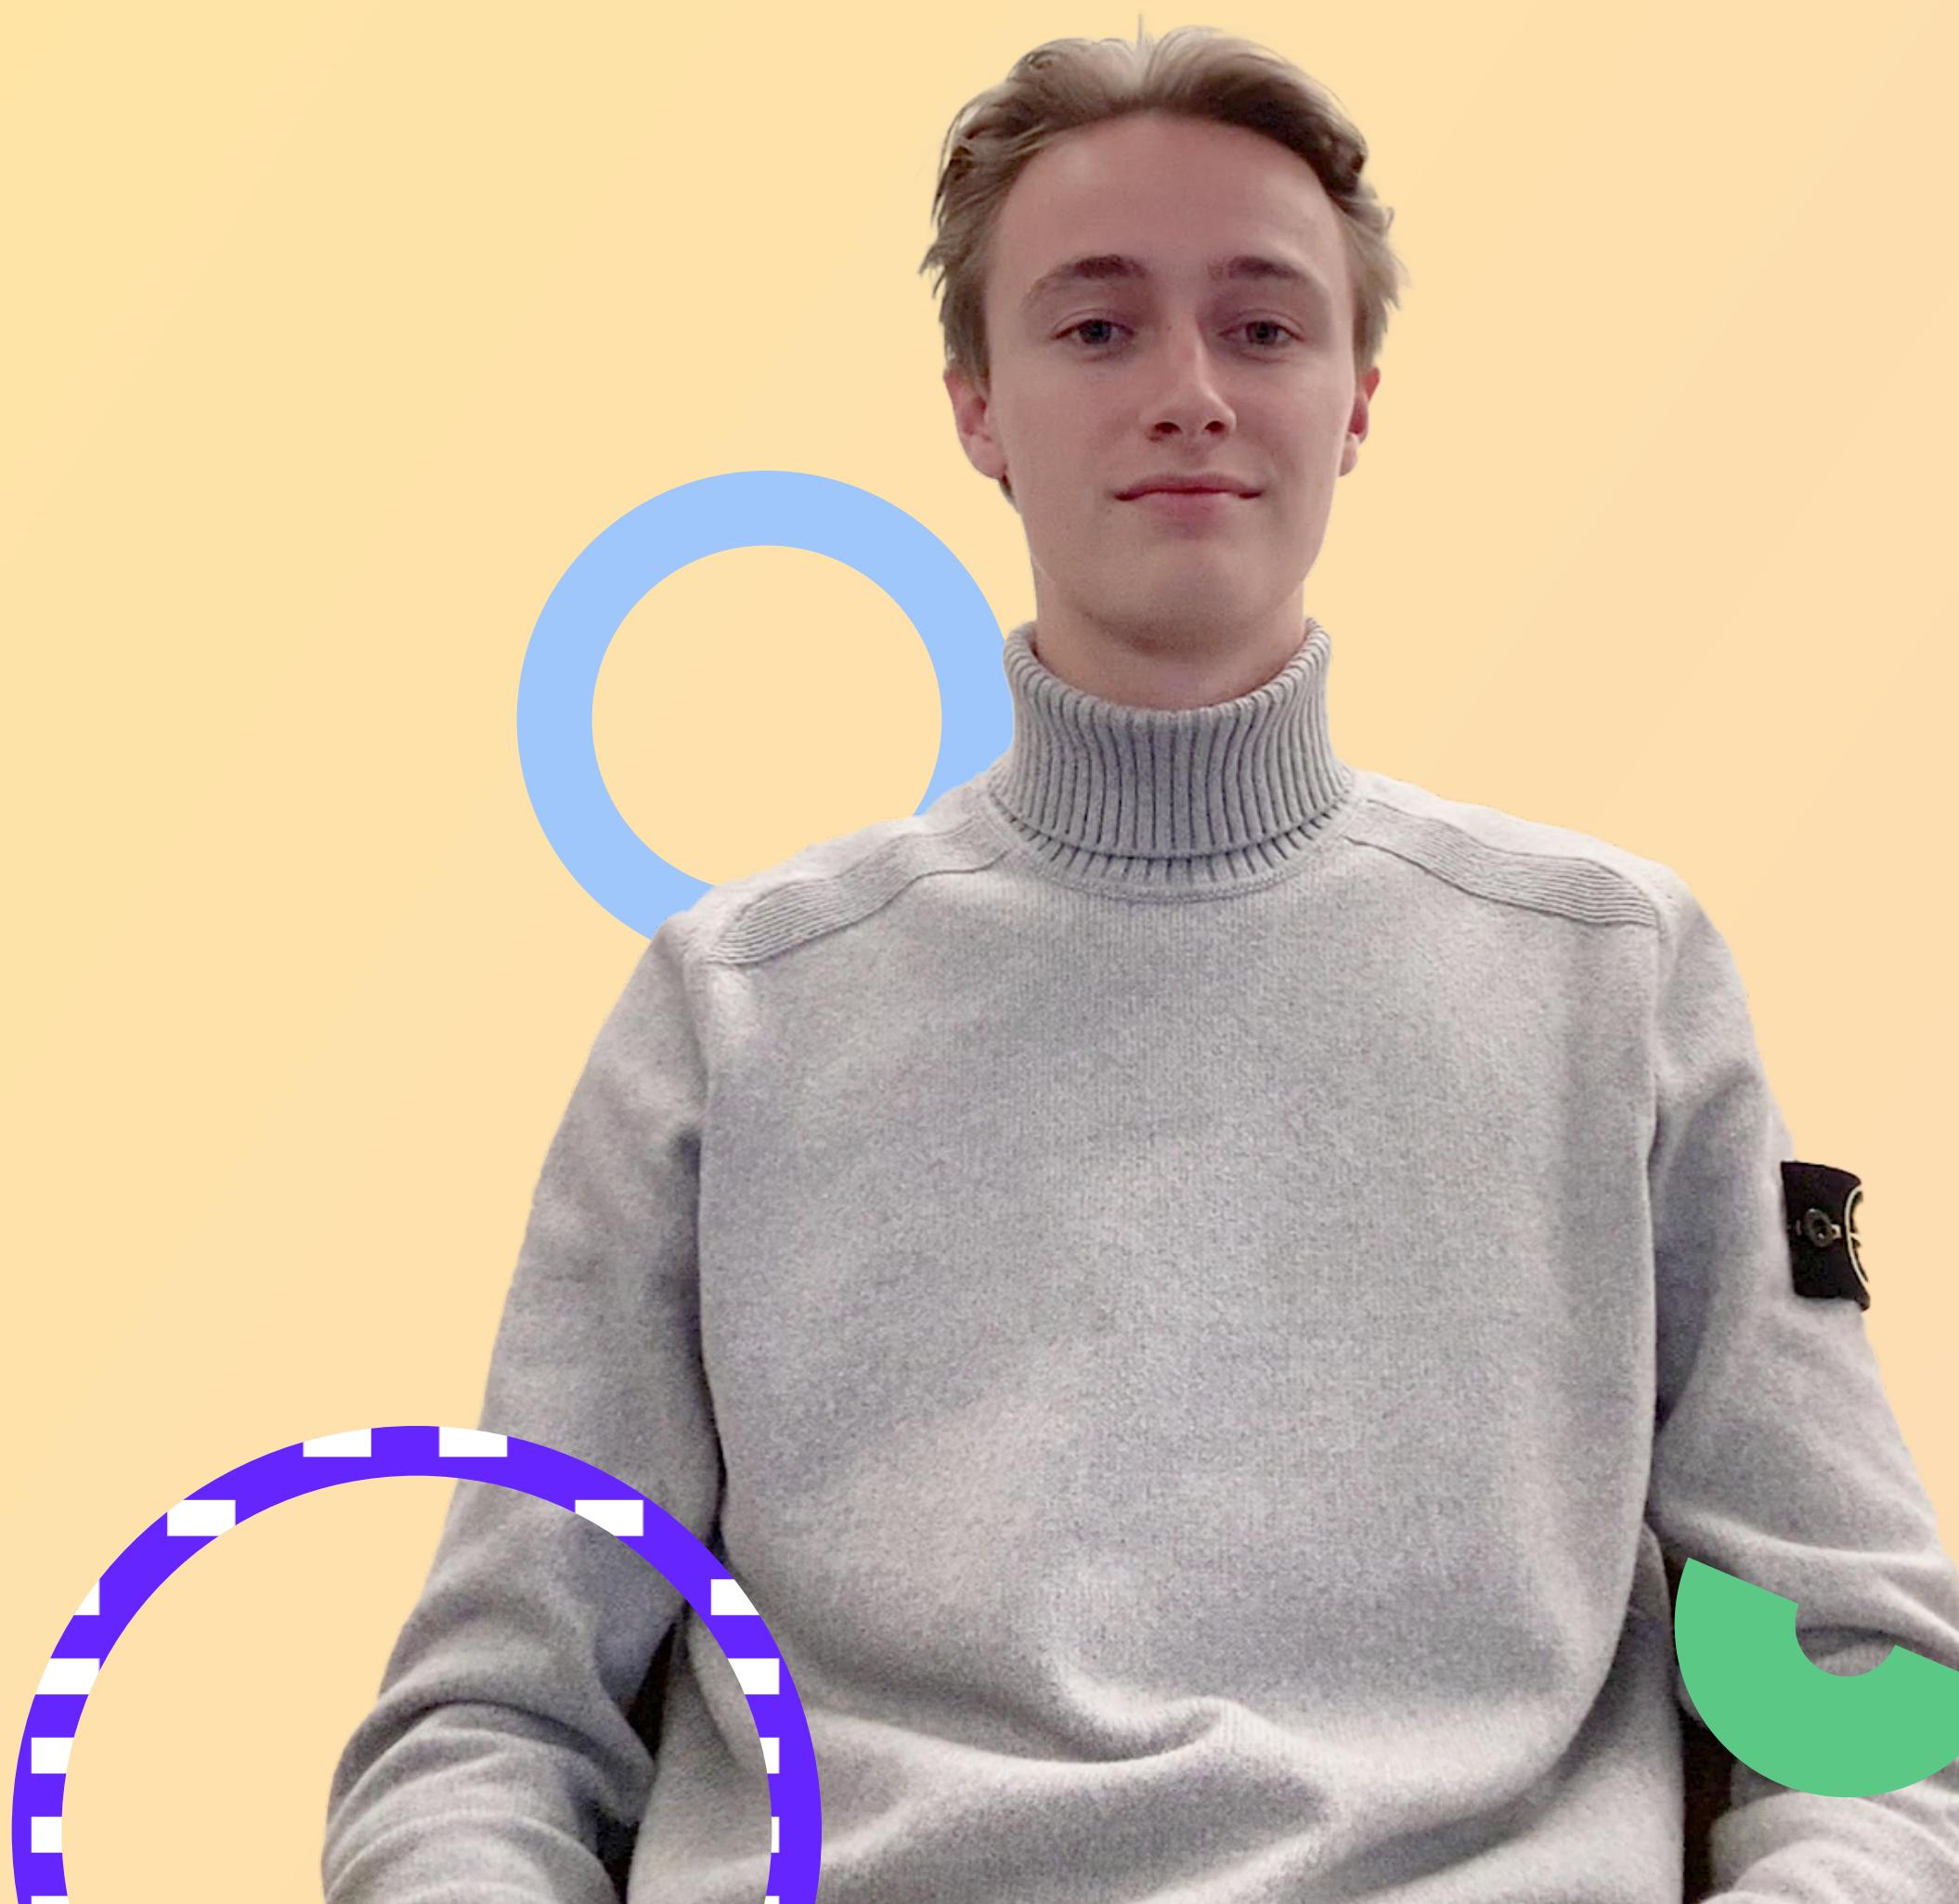

Our goal is to provide our clients with a personalized approach and the opportunity to solve all their financial problems with a reliable partner Monexo.

We are the link between our esteemed clients and the latest and most profitable methods of generating profits. Our beliefs are that everyone deserves to live life to the fullest and enjoy life.

Our team

MR. BUCHER

IS A PROJECT LEADER

Mr. Bucher is a project leader from Switzerland, learned at the University of St. Gallen, St. Gallen, Switzerland, MBA, got first and main education at the University of Zurich in the sphere of management.

Has a high degree in management and business development skills in the field of FinTech. Examples of this are Bitmart exchange, SMB Capital company - this company is connected with teaching trading skills on financial markets. Also Leonardo understands the benefits of P2P markets such as Saudi Arabia, India and China and decided to realize a business project with Monexo company.

Currently having a very good understanding of P2P market mechanisms and having a farm of 4000 servers connected to it which is automated with the help of software artificially creates excitement on P2P platforms, the company achieves results in profitability and is ready to realize this philosophy for large scale market.

Our team

“

MR. JINDAL

IS AN EXPERT IN MARKETING

His experience of more than 11 years in technical development in the following companies: Kraken exchange, worked in Gozoop marketing agency in India - creating a lot of innovative technical solutions and in the company people.

Also where he and his team integrated different software solutions. Was trained at IIM Bangalore - Indian Institute of Management and then went to University of Chicago Booth School of Business, USA. Has enough knowledge and skills to implement large projects and now I'm ready to invest my knowledge and experience into Monexo and take it to the highest level.

With Monexo you can earn!

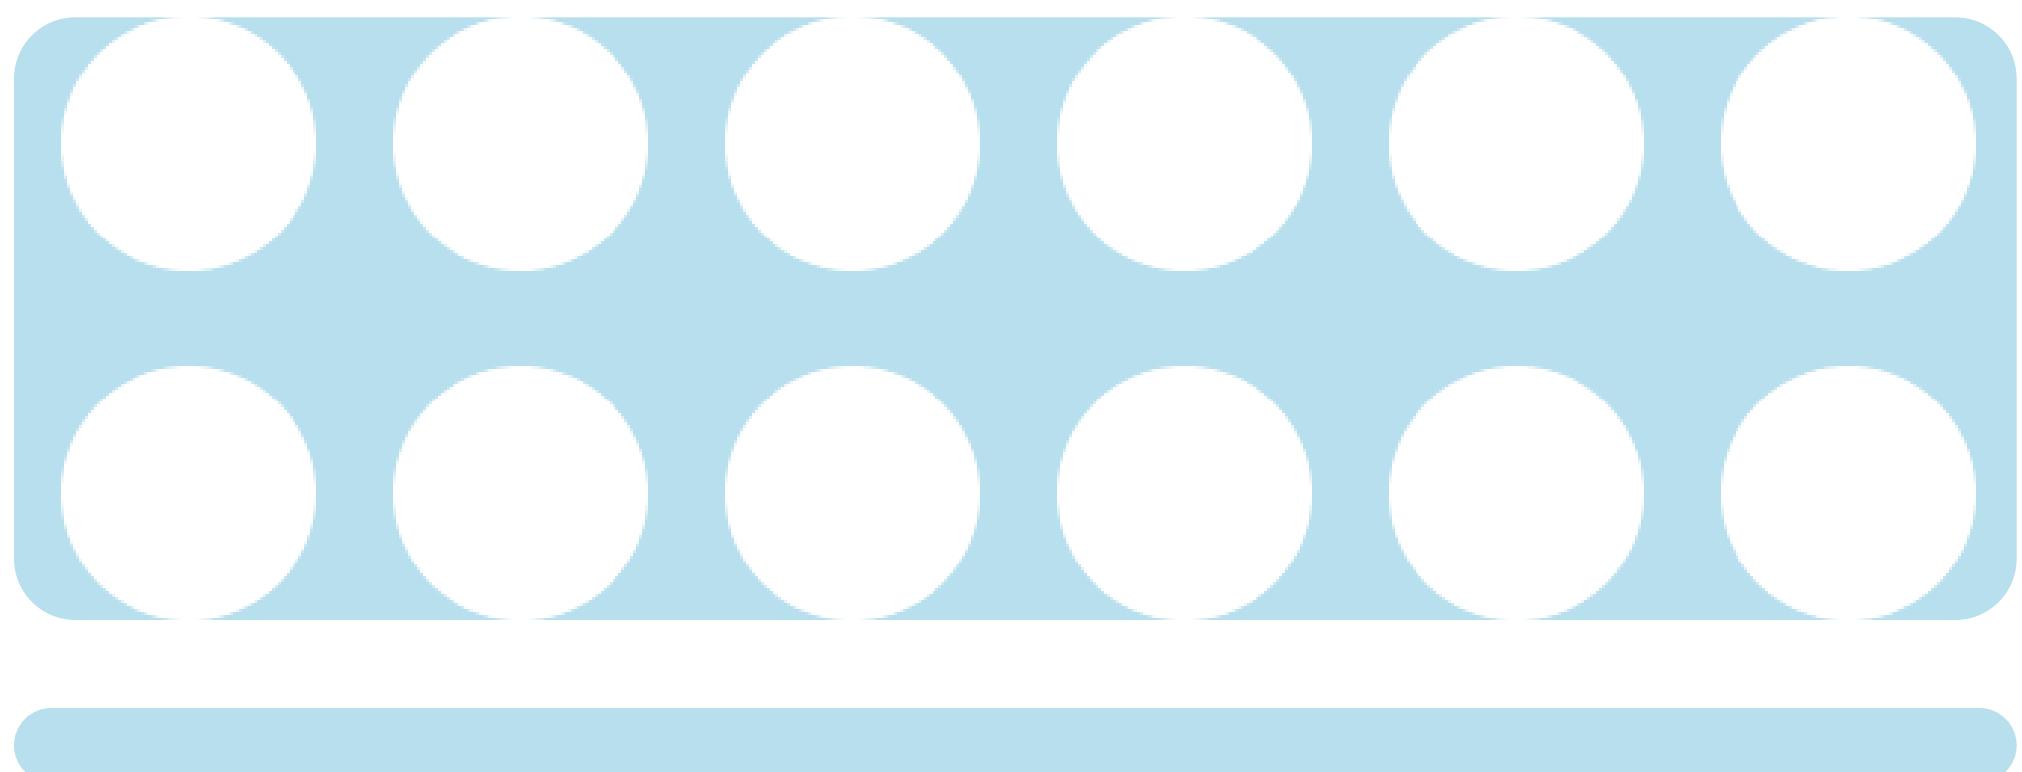

We believe that today the most profitable direction
is P2P in India, China, Saudi Arabia

- because we have created a whole farm (more than 4000 servers) that operates absolutely automatically, the process oslike mining, but only without physical devices and all on remote machines
- today we are able to adjust the spread on each transaction and because of this investor receives almost no risk regular profits, and the theme P2P transfers, withdrawals, and deposits are becoming more popular and accessible for ordinary citizens.

We have prepared the most important:

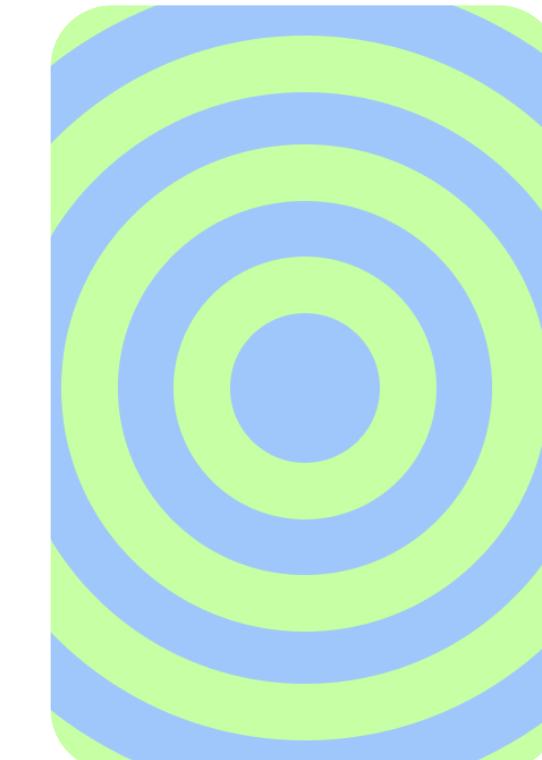

“
The system of
stabilization
and
preservation
of capital

“
We don't want
to strive to earn
a million by
risking it

“
Our

We have created
a comfortable
distribution
strategy

Automated solution for the P2P market due to Monexo-Invest

Monexo is a trained team of experts in p2p automation. We have implemented a systematic approach to create excitement.

HOW IT WORKS?

Our system consists of a massively higher offer to buy and sell and by creating false offers we artificially raise the value of the assets we need. Our remote servers are connected to the central computer and the supply/demand rises at the right moment for each pair we need. Clients who buy and sell assets automatically adjust to the best offer, thus bypassing the offers of our competitors who do not use automatization but do everything manually or semi-automatically, at this moment everything is automatic and from thousands of remote machines.

Why P2P?

P2P market was chosen because China, India, saudi arabia regions are crowded with demand for P2P platforms. In their banking system today there is no easy way and merchant providers who allow the customer to buy online currency (btc, WebMoney, - and other payment systems) - but the demand for these currencies is very high. Precisely because of the specific study of the regions, and understanding of the problems, we decided to go into this very profitable sphere.

We were always more inclined to conservative methods of profit formation, credit market, stock market (stocks, bonds) and other conservative instruments. But due to the fact that P2P area (investing, crediting, exchange) is getting enormous - we also want to be involved.

And the most important thing is that there are all conditions for this - on centralized and in the future on decentralized sites. Today we work with more than 18 different platforms where we have more than 4000 remote machines, platforms: Changelly, BitOasis, Coinmama, Cex, Rain, Kraken, Paxful, CoinCola, Coindirect, Buycoins, WazirX, SecureShift, Remitano, Bitfada, Swapika, OTCBTC, CoinDCX, HodlHodl, ZebPay.

And we try to constantly update the list of services.

How do we see the evolution of the p2P market?

It is already clear that P2P on centralized exchanges and exchange offices has its own characteristics and the main feature is all sorts of vulnerabilities: limits, restrictions in the number of transactions per day, compliance (security) department and other subtleties.

We are very well aware of the P2P market and understand even better the solution everyone is waiting for - it is a decentralized P2P marketplace, which will fix all the shortcomings of the current centralized marketplaces.

If you make a P2P dex exchange fiat to crypto, so you will find a unique opportunity to enter a completely free haven that my team and I are already actively developing.

Future on the Monexo-P2P Platform

We are already working out and creating a platform for buying and selling assets on a hybrid smart contract that will initially work with BTC, ETH, BNB, TRX blockchains.

That is, you will be able to connect your Web3 wallet of your choice to the platform (Trust Wallet, MetaMask, Safepal - and others) and buy the currency you need and sell your existing assets, in exchange for cards from more than 15 countries. And it's all done automatically in a decentralized way, without interference or restrictions.

The function of our contract works this way - you choose transaction, and the seller/buyer, and we act as intermediary, receiving both crypto and fiat, and after receiving funds from both sides, our smart system automatically makes an exchange (one receives crypto and the other receives fiat). Commission that we charge is only 0.3% of each transaction for intermediation.

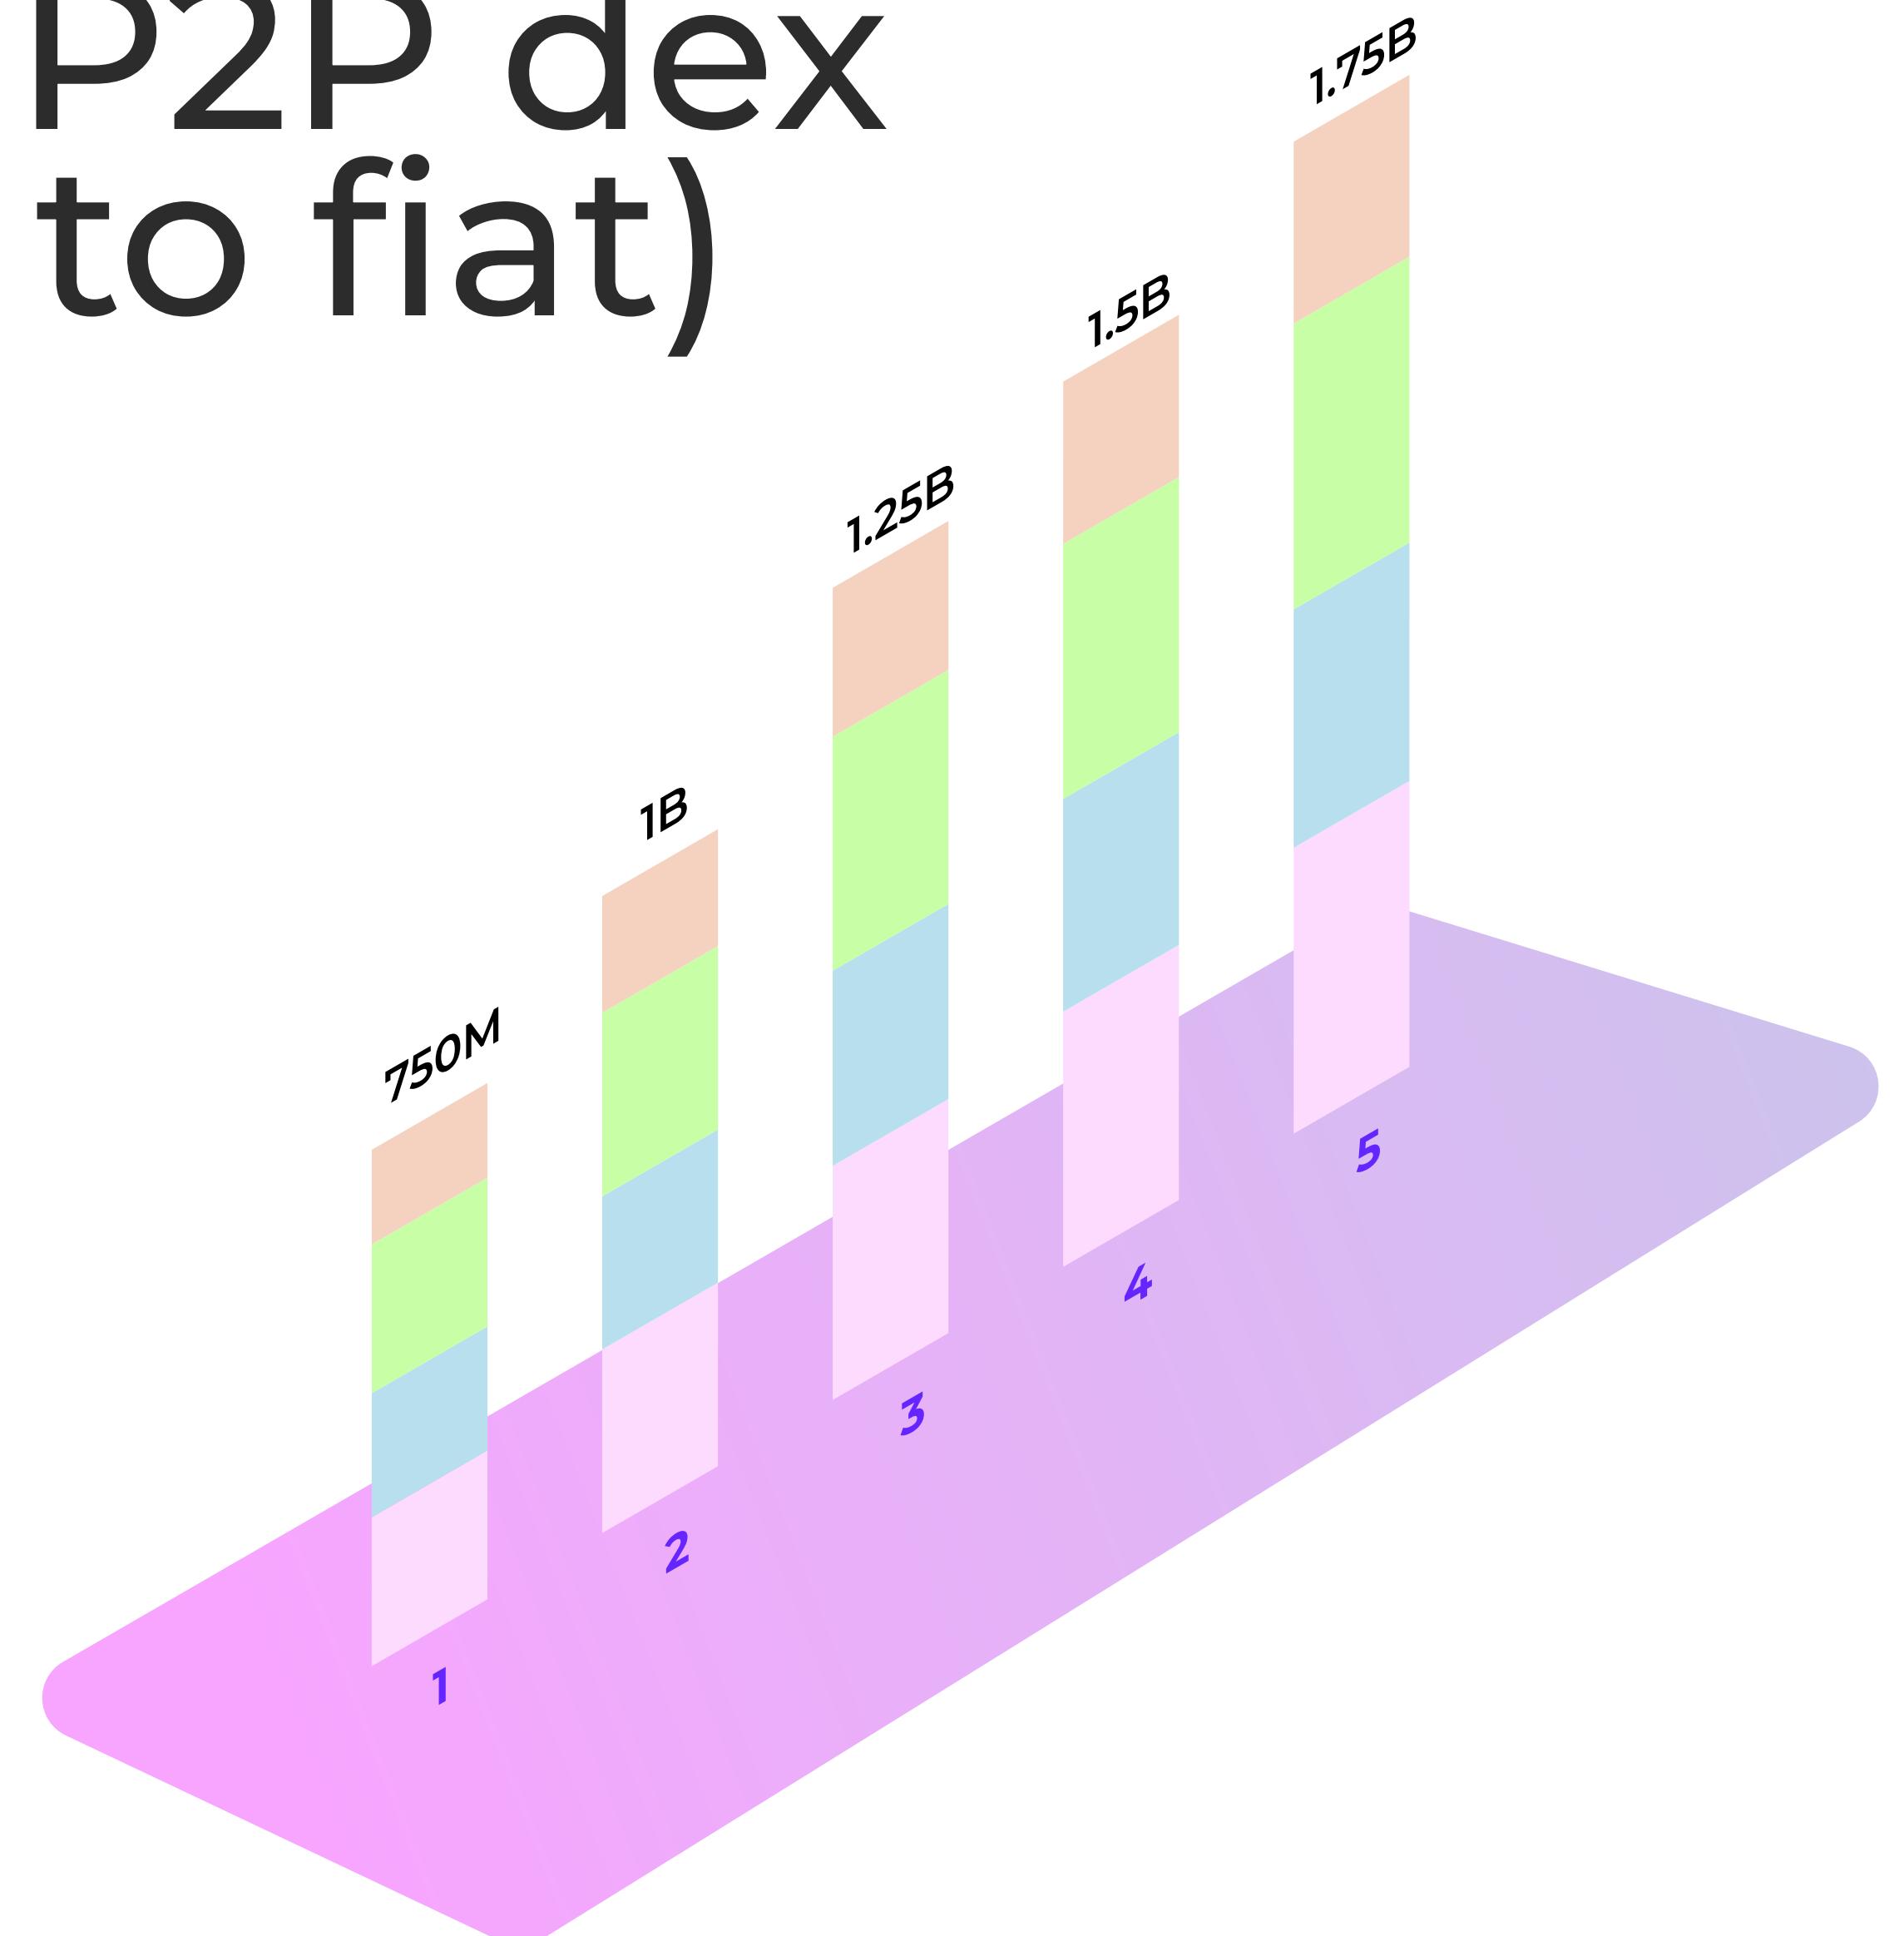

Industry P2P dex (crypto to fiat)

The market has its own already formed volume of orders/bids to buy and sell digital assets.

Today the OTC and P2P over-the-counter trading is estimated to be around 500,000,000 per day. We understand that we can't get the whole market for 5% of the market, namely we can spend \$25mln through our platform, which will allow us to generate net income of about \$75 000 per day. And in the future this amount will multiply.

As we see the growth of demand for P2P dex (crypto to fiat) in the next 5 years.

Growth from 500 000 000 annually by 250 000 000 and so in 5 years it will be 1 billion 750 million dollars a day so the company getting even 5% share will have about 400 000 \$ per day of net profit.

History of our P2P transactions

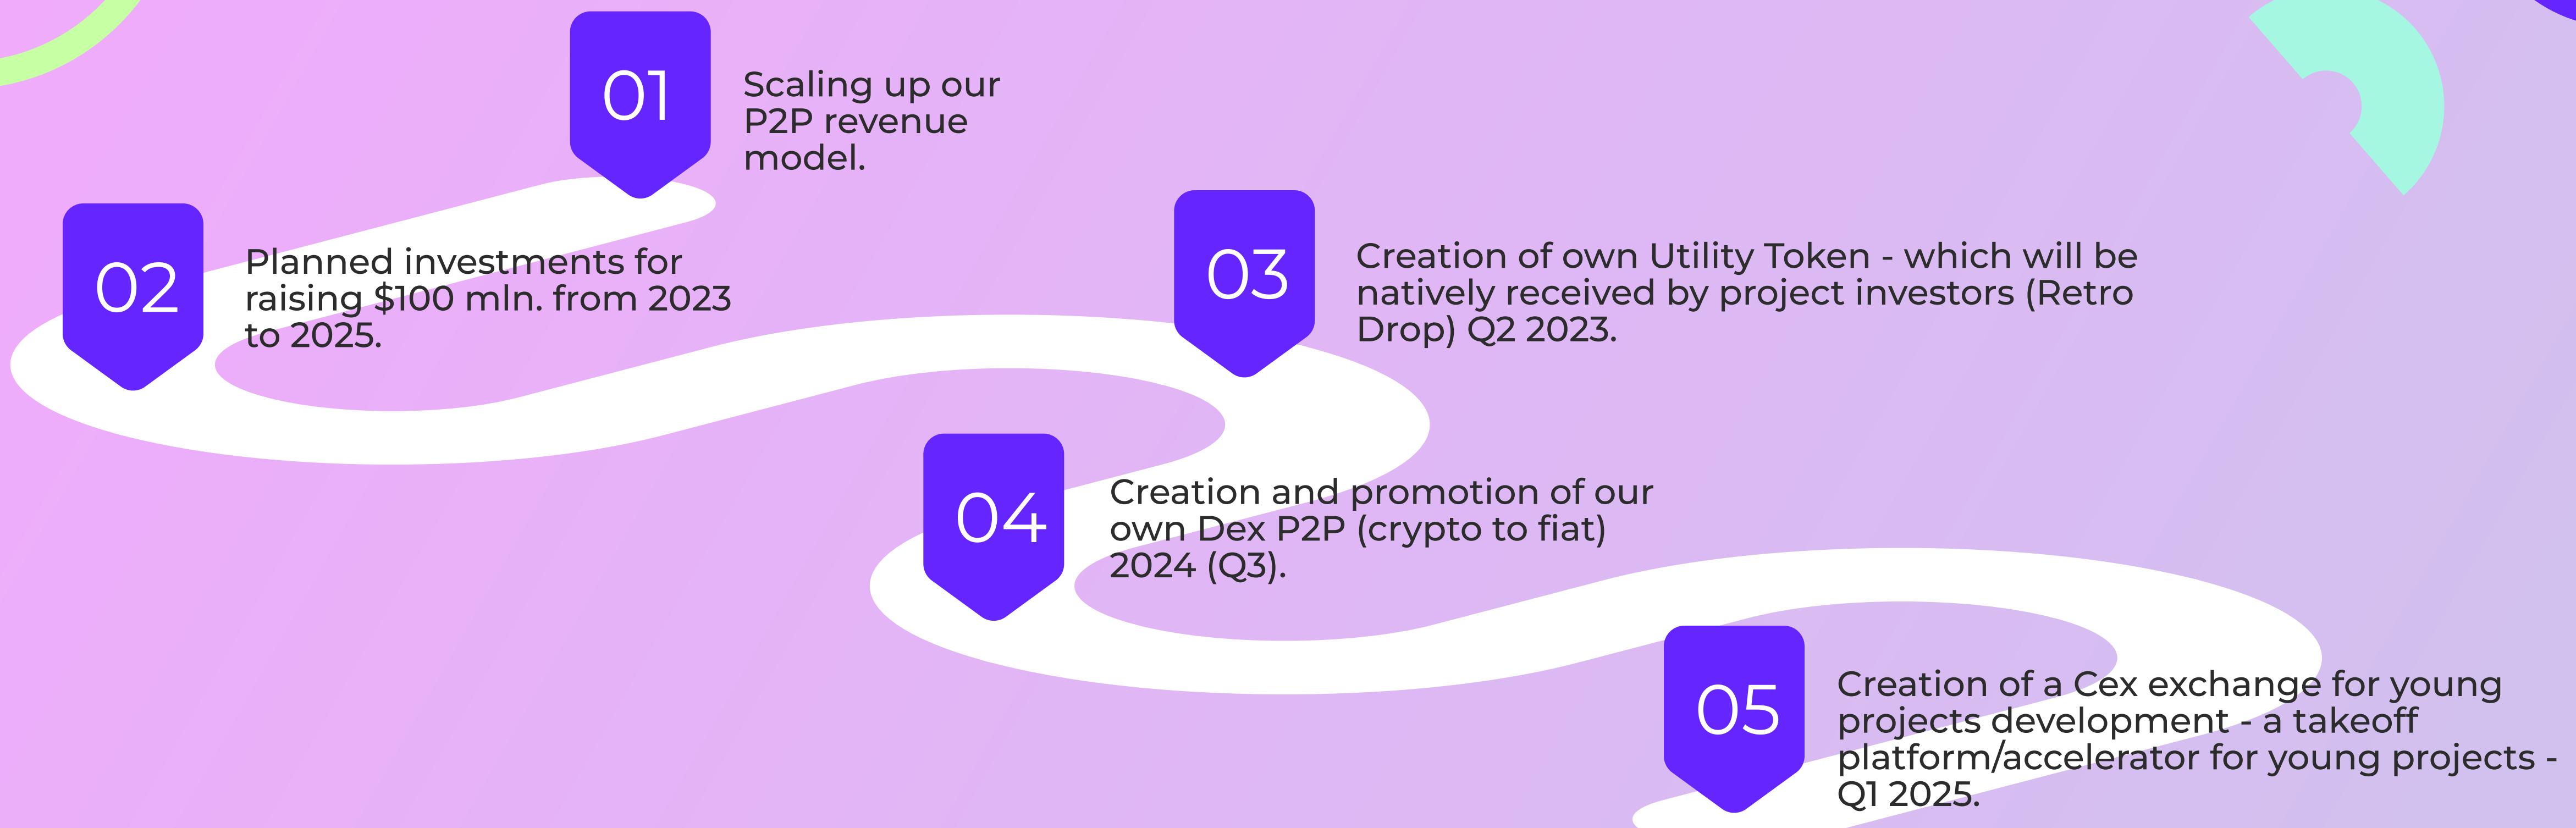

OUR CASES

Monexo daily increases the number of remote machines to conduct as many deals as possible with the organic buying on each of them. We do not need to create something supernatural in this market, we just scale an already finished model of earnings.

Monexo roadmap - development for 6 years

Bright advantages of participation in Monexo

01

We give you a choice of flexible investment conditions.

02

We've created a unique algorithm of P2P exchange hype.

03

We've made an automated profit system.

04

We understand what products and developments the market needs.

05

We give you the opportunity to receive tokens of our products on a drop's basis.

06

You develop a cool business that does not depend on external factors, economy or bitcoin exchange rates.

07

Creating partnerships also makes profit for you.

Monexo MNX token (utility token)

Company token Monexo MNX (Utility Token) - this token entitles you to receive a share of the company's products. There will be a total of 100,000 tokens. Everyone with retro drop will be able to receive a token without investing.

RETRO DROP

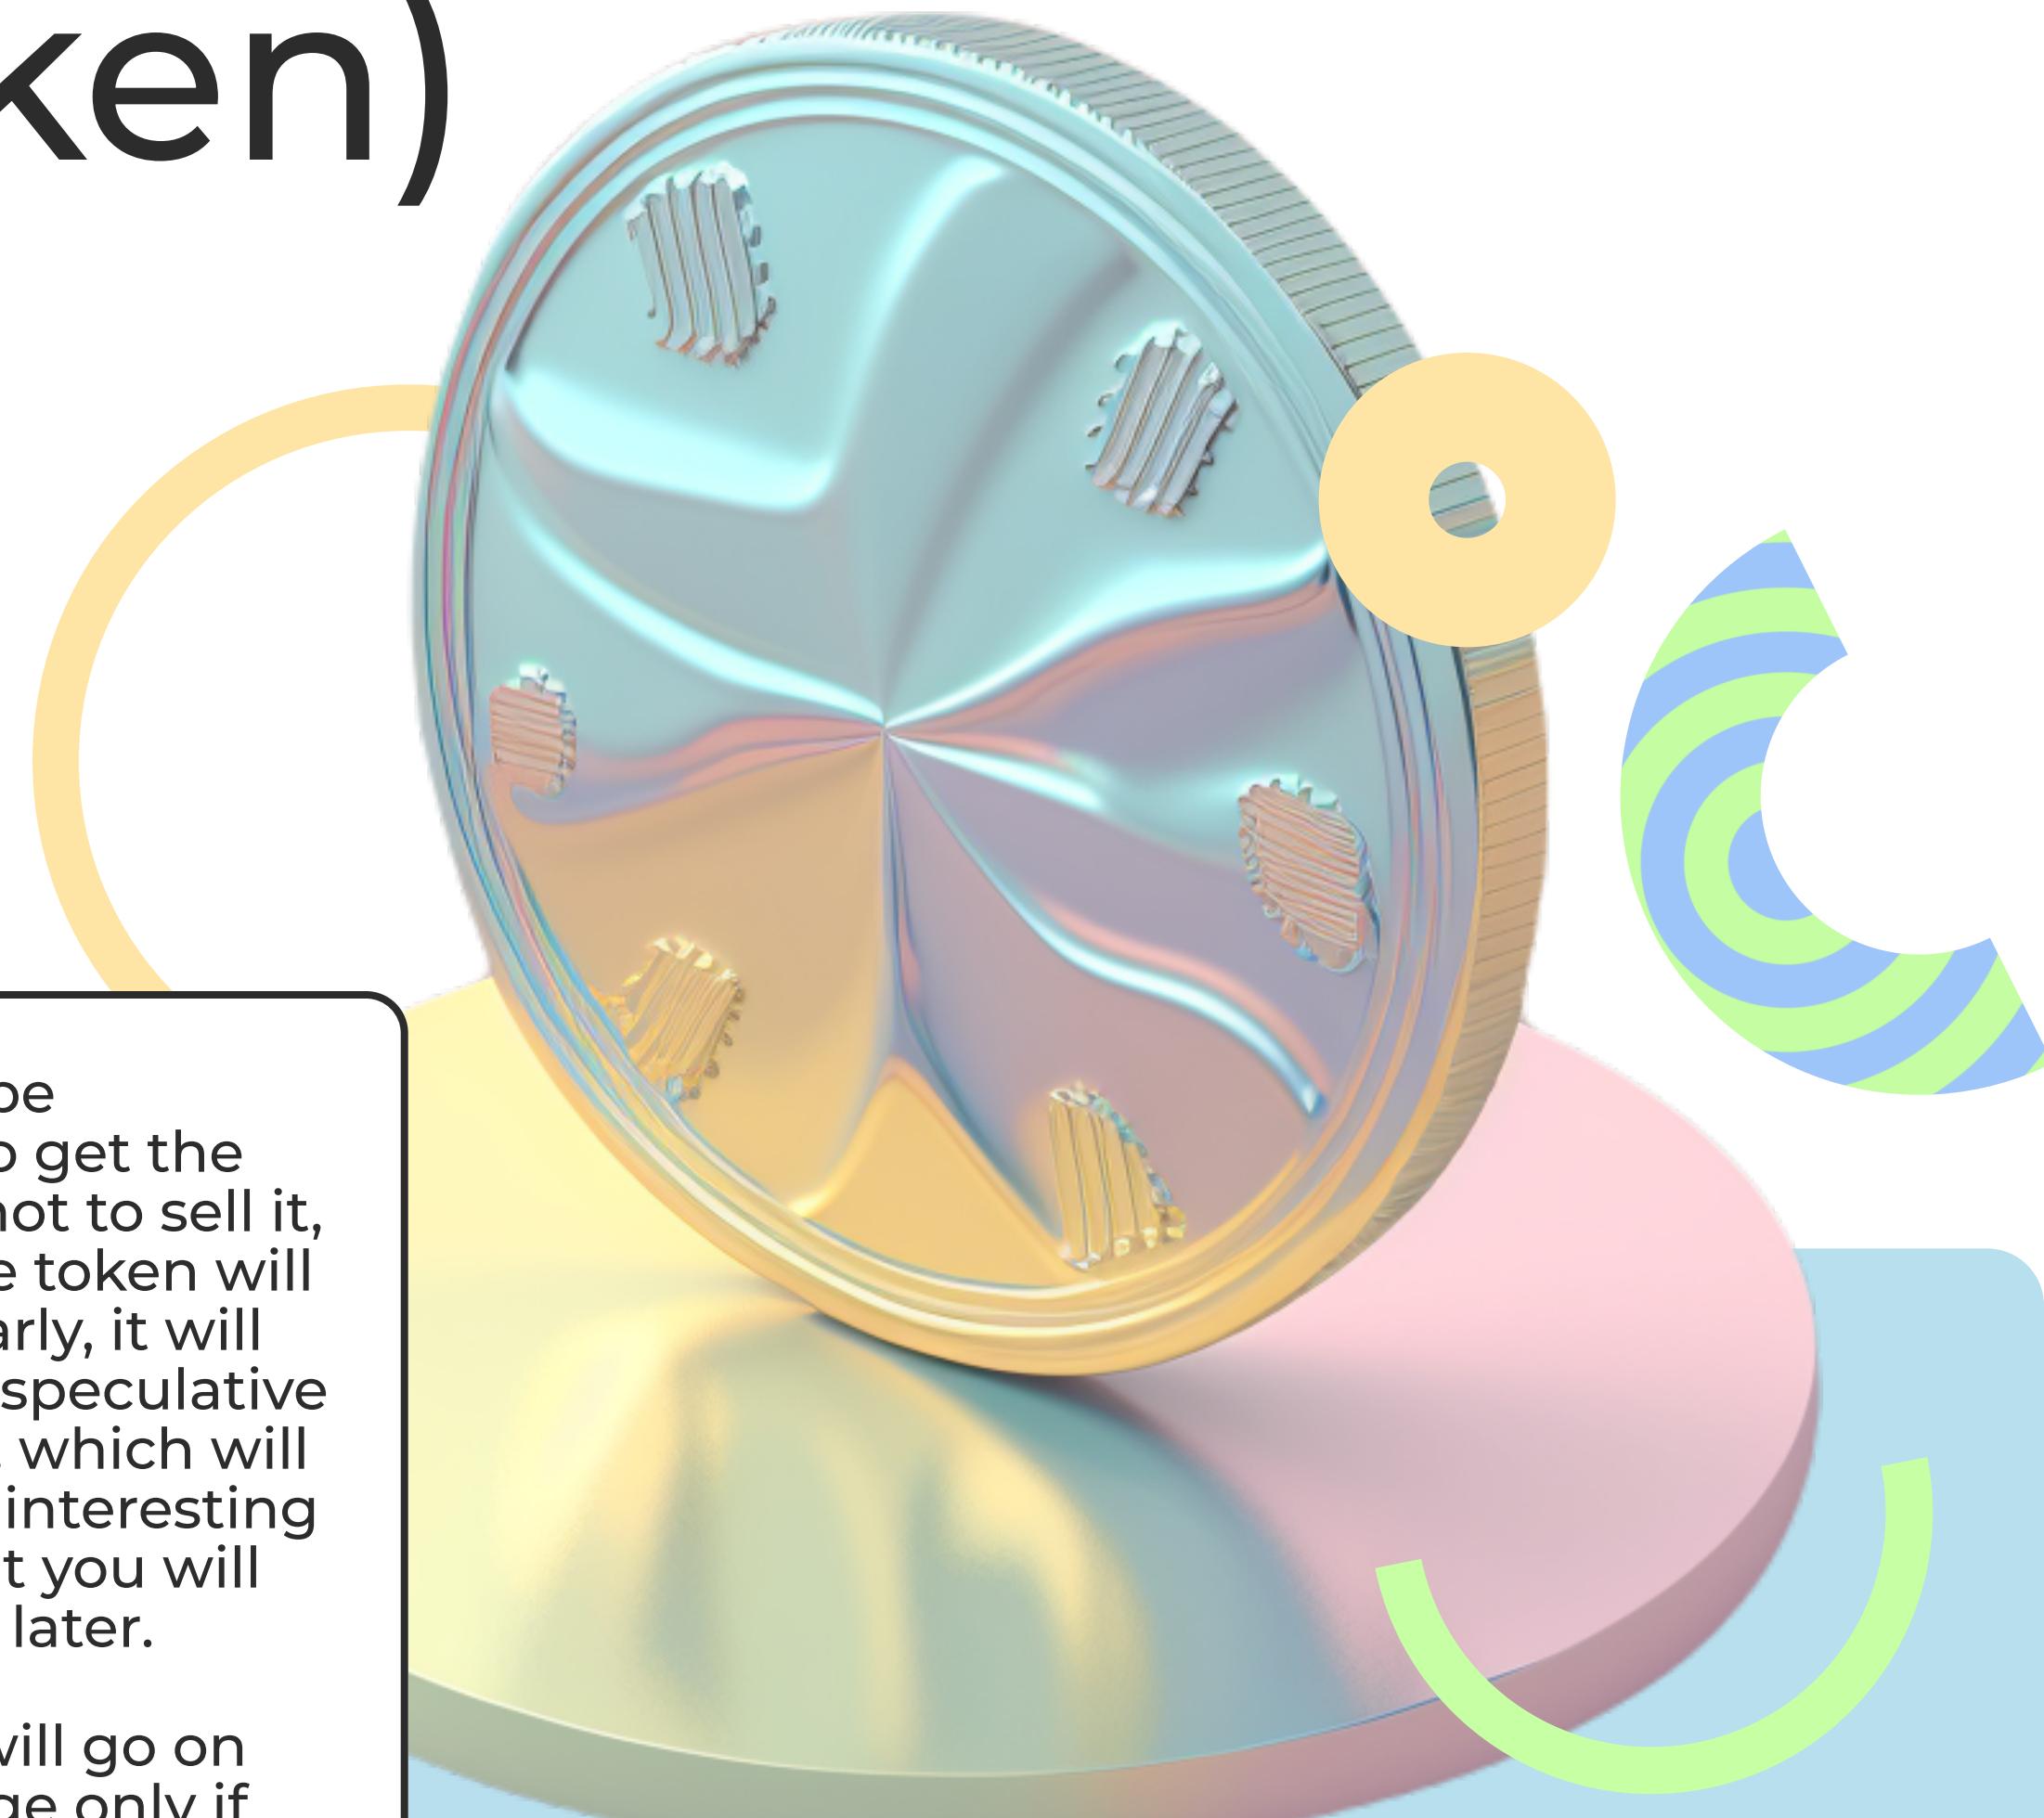

Retro Drop - this is a payment for you for using the service, in fact a payment for past activity.

Every person who will actively invest in the project and give information to their partners will receive a project token, which on 15.06.2023 will be traded internally on our platform on 15.06.2023.

The amount of tokens is very small and we will give 49% of all tokens to our partners, that is why you will benefit from having an open investment in the company, which will allow you to receive project tokens without any investment, and which the client you will randomly receive.

Why it will be profitable to get the token and not to sell it, because the token will grow regularly, it will be a purely speculative instrument, which will have a very interesting formula that you will learn about later.

The token will go on the exchange only if the project community votes for it in an open vote after its release.

Only 100,000 utility tokens

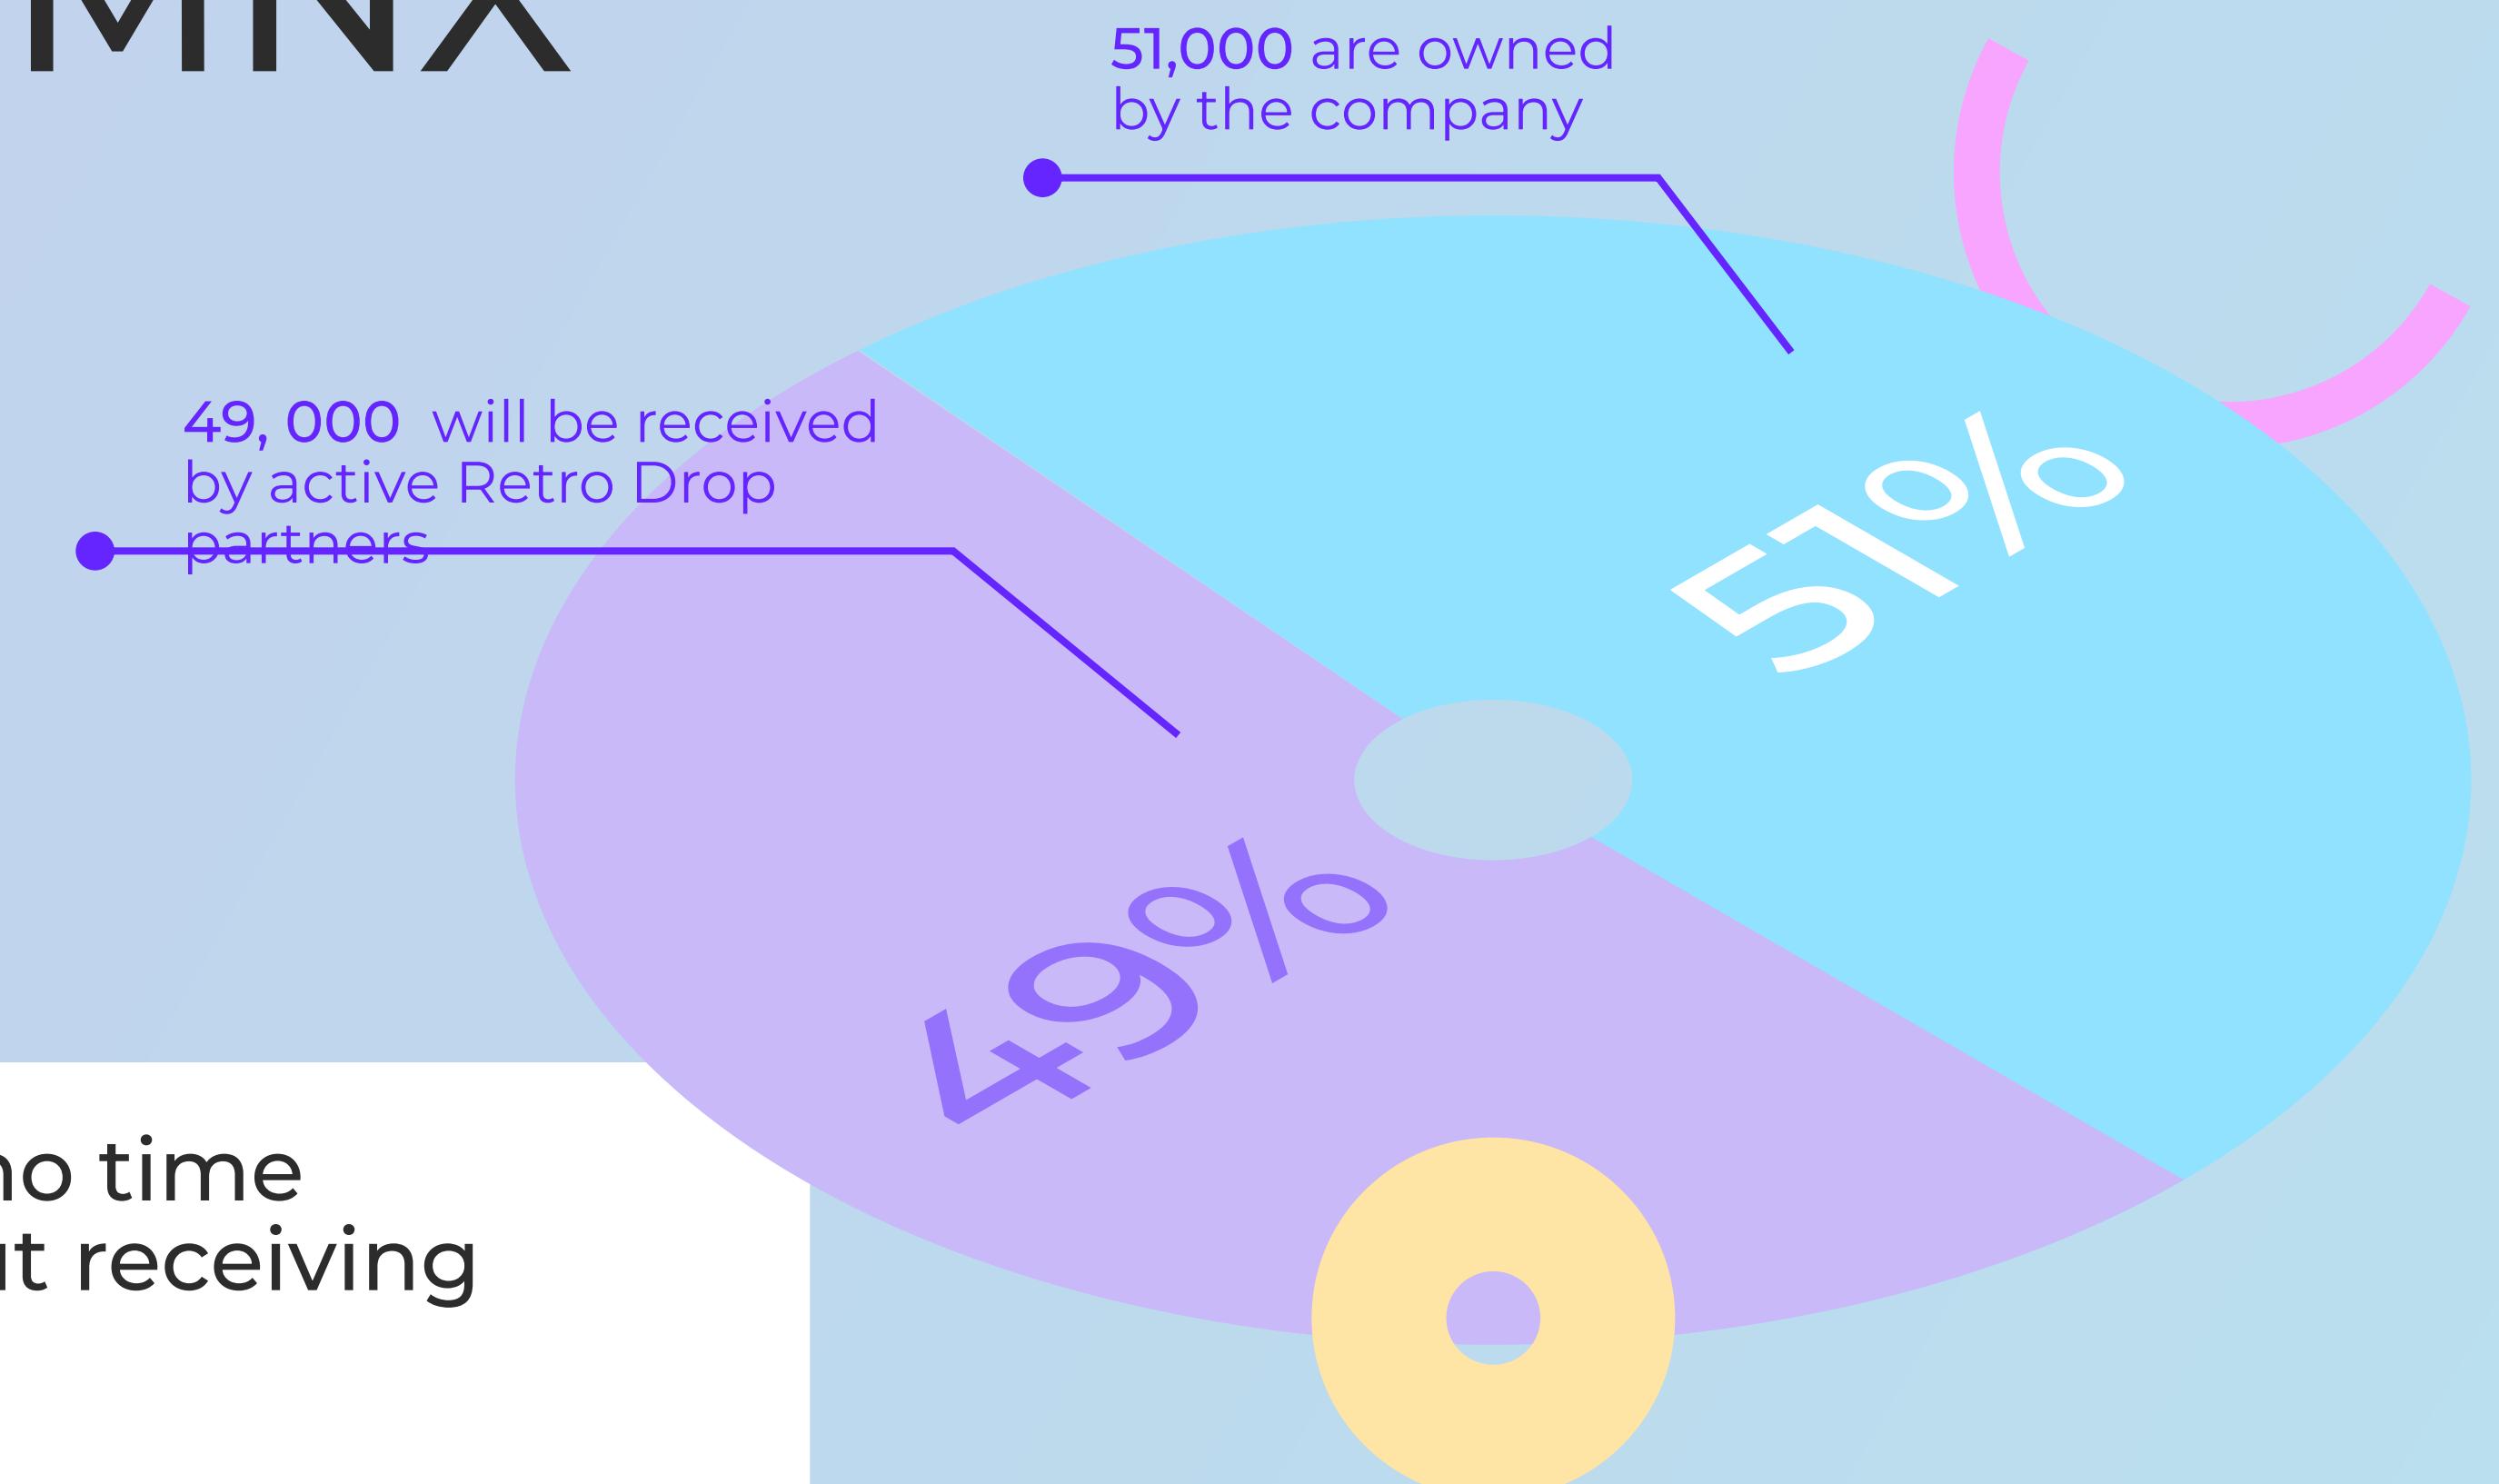

MNX

The bigger your team and the more you invest, the more you will own tokens of the project and you will be able to earn extra money on it later on, because the growth formula for each transaction will be attached to the token.

Make investments, get tokens - form several sources of income.

Retro drop - is accrued randomly and has no time commitment to receive. Retro drop is about receiving rewards for past activity.

You were active in March 2023 and received tokens in April 2023
